

CONTRIBUTIONS REGARDING THE STRUCTURE OF SOME HERBAL REMEDIES

Lucia DUMITRESCU¹

Abstract: *Taking into account the important role that medicinal plants play nowadays in pharmaceutical products, our research was focused on the chemical analysis of some of the most interesting plants possessing biological activity, such as: Green tea (*Thea sinensis*), *Thymus serpyllum*, *Urtica*, *Aloe vera*, and *Symphytum officinale*. The phytochemical study intends to evidence the chemical structure and biological activity of these plants which could be used in cosmetics and pharmaceutical products*

Key words: *medicinal plants, chemical structure, biological activity.*
