

WOOD AS RENEWABLE MATERIAL AND ITS NATURAL DURABILITY

Aurel LUNGULEASA¹

Abstract: *This paper presents some aspects referring to wood which is a renewable material, owing to its cambium division and its multiplication by seeds. It also presents aspects referring to wood durability as a main factor related to its damage and the factors connected to the species and climacteric condition which influence durability.*

Key words: *wood, wood durability, renewable material, factors influencing durability.*
