

THE PHONIA TRICS OF THE HUMAN VOICE THROUGH NON-MEDICAL METHODS

Claudia POP*

Abstract: *Dysphonia is the disease of the spoken or sung voice, which, if it is not discovered in time and treated accordingly can lead to serious disorders of the spoken or sung voice, even to losing it. Seeing a doctor specialized in phoniatics, who will treat it medically and being supervised by a vocal therapist, respectively by a canto teacher is the winning formula of a healthy voice and of the vocal longevity.*

Keywords: *Phoniatics, dysphonia, non-medical therapy.*
