

QUANTITATIVE GRAPHICS REVELATIONS – CHARLES JOSEPH MINARD

Mihai BURLACU¹

Abstract: *The article approaches a retrospective look on the two graphics created by one of the pioneers in quantitative graphics, Charles Joseph Minard. Minard had many inventions amongst which I can mention: pie charts, the divided circle in cartography etc. His masterpiece is however considered Napoleon's March on Moscow 1812-1813. This graph, together with its pair, Hannibal's Campaign in Italy, is the subject of this article, and I intend to present its accuracy in statistical representation.*

Key words: *graphs, figurative map, flow chart.*
