

CHALLENGES AND MUTATIONS IN SOCIO-HUMAN EPISTEMOLOGY

Daniela SOREA ¹

Abstract: *The determinism of classical physics is replaced in the quantum paradigm by a fundamental and constitutive indeterminism. Post-modernism is naturally associated with the new paradigm of physics. Post-modern epistemology values relativity and opens to the unorthodox manifestations of the human. A new self-representation of man in relation to the world is gradually associated with a new reality outlined by 20th century physics. The idea of the quadric-dimensional continuum is one of the greatest contemporary ideas.*

Key words: *epistemology, complexity, discontinuity, post-modernism, mutation.*
