ELECTRONOMICROSCOPIC DATA ON GINGIVAL MUCOSA IN WOMEN IN RELATION TO OVARIAN CYCLE

L. NEICA¹ C.L. BOLD¹

Abstract: The structural behavior of cyclic gingival mucosa of woman, in relation to ovarian cycle, was studied at the electronic microscope. Obtained results are less spectacular, at least for the follicular hormone phases, for the time of ovulation and the start and medium estro-progesteronic phases. They become more evident in the final estro-progesteronic phase and the hemorrhagic phase.

Key words: gingival mucosa, ovarian cycle.
