

BRONCHO-PULMONARY EPIDERMIOID CARCINOMA IN A PATIENT WITH ANTECEDENTS OF UTERINE CERVIX EPIDERMIOID CARCINOMA

Assistant *Daniel Ciurescu*, MD
Faculty of Medicine, “Transilvania” University Brasov

The article presents the case of a 49 years old patient, diagnosed in 2000 with an uterine cervix epidermoid carcinoma (IIB stage), treated by radio- and chemotherapy followed by surgery, and with a scuamous no keratinized broncho-pulmonary carcinoma localized in the right inferior pulmonary lobe (IIIB stage).
