Caz clinic

CAZURI CLINICE PARTICULARE DE
SUPURĂȚIE AURICULARĂ

Șef lucrări dr. Codarcea-Munteanu Dorin
Facultatea de Medicină Brașov

Chronic middle-ear suppuration represents an important health problem for the patients through the possible loco regional complications which appear in the acute phase and especially the chronically phase of the disease.

From 39 cases of suppuration with endocranial complications in the last 10 years (1998-2008) we choose significant examples concerning the complexity of symptoms, evolution and treatment.
