STUDY OF SENSIBILITY AND RESISTENCE TO ANTIBIOTICS OF β HEMOLITIC STREPTOCOCUS, GRUP A

Jr. Assist. Raluca Badea, MD
Faculty of Medicine, Transilvania University of Brasov

The very large group of streptococci is of great medical importance, some of the species being part of microbiocenosis while others are responsible of infection. In the era before the antibiotics, the streptococci were among the most important infectious agents, being responsible for a significant mortality. The present paper tries to evaluate the sensitivity of different types of streptococci to a number of antibiotics.
